## **Energy Specialist Hired to Focus on New Energy Regulations**

SARASOTA, FL – COMMERCIAL REFRIGERATOR DOOR COMPANY (COMMERCIAL) has created the new position of Energy Specialist. The new Energy Specialist will focus efforts on all areas affected by the recent enactment of the Energy Independence and Security Act of 2007 (EISA) including the interpretation, explanation, and dissemination of information and training for COMMERCIAL and its customers.

Effective January 1, 2009, the EISA legislation establishes new compulsory requirements for walk-in cooler and freezer components (panels, doors, and lighting), as well as a wide variety of other appliances and equipment. The goal of the Act is two-fold: for the consumer, energy usage will be reduced and for the manufacturer, products should become more energy efficient.

Rob Winsler, President, said, "The EISA standards will affect most of the STYLELINE® products manufactured by our company and within our industry. The new standards allow us to build upon our technological and energy efficiency advantages over our competitors. Our frame and door systems are already closer to the EISA requirements, thus our ability to fulfill the EISA requirements will be easier to accomplish, which should result in less of a price increase to our customers versus our competitors."

COMMERCIAL REFRIGERATOR DOOR COMPANY has a demonstrated commitment to manufacturing the industry's most energy efficient frame and door systems, including the industry's first completely energy-free system introduced back in 1993. "The company's dedication to its partnership with ENERGY STAR™ is but one example of our commitment to efficiency and sustainability," said Pat Dold, Vice President Sales and Marketing. He continued, "The hiring of an Energy Specialist is yet another step that our company has taken to show our commitment to the energy conversation cause."

COMMERCIAL REFRIGERATOR DOOR COMPANY is a Florida based manufacturer of a comprehensive line of door and frame systems for walk-in and reach-in coolers and freezers. Founded in 1975, the company is well known for the STYLELINE S//E system which is Zero-Energy door and frame system, the STYLELINE 20//20 system which is a Guaranteed Condensation Protection system and many other unique, proprietary and technologically advanced solutions and accessories.
