

PRESS RELEASE

For Immediate Release

Commercial Refrigerator Door Implementing New Software

SARASOTA, FL – COMMERCIAL REFRIGERATOR DOOR COMPANY is making some significant computer software improvements at the end of 2009. Rob Winsler, President said, “We are extremely excited about these improvements and the tools that they will offer us to better serve our customers.” While the improvements are generally “seamless” for the customer, there may be some minor changes that will be noticed.

In particular, any Commercial Refrigerator Door Sales Order (SO) numbers or Bids that were entered under the former computer entry system will have a new number beginning January 1, 2010. For those customers needing to incorporate the new numbers into their PO information, they simply have to request COMMERCIAL REFRIGERATOR DOOR to provide cross-reference documentation. No other changes will be required.

Additionally, COMMERCIAL REFRIGERATOR DOOR customers will notice in future communications a detailed, yet easy to read document format for quotes, acknowledgements, invoices and other similar documents. Pat Dold, Vice President Sales & Marketing, added that COMMERCIAL welcomes any comments that customers might have for additional improvements relative to these documents.

COMMERCIAL REFRIGERATOR DOOR is the manufacturer of STYLELINE® Doors used in display applications in the commercial refrigeration segment. All STYLELINE products are compliant with the Energy Independence and Security Act (EISA) of 2007.
